

Care of your Windjammer

With your Windjammer a free brush will have been enclosed.

To be totally effective it is important that the pile of your Windjammer remains in prime condition and the following points may help:

- 1** Brush frequently to keep the pile unmatted and clean.
- 2** After using in the wet, shake the Windjammer to remove the excess moisture, allow to dry naturally and brush before putting away.
- 3** If necessary, your Windjammer can be carefully hand washed in a mild detergent. It is advisable to use a fabric softener with the final rinse. Allow to dry naturally and then brush.

HANDY HINT

When your Windjammer is not being used try turning it inside out; this not only saves space in your flight case, it also protects the fur. A quick shake will restore the original pile after you reverse the procedure.
